Assignment

Session - 2021-22

Maximum: 20

Subject- English

Class: B.A.LL.B. Semester: Ist Semester

1. Draft a resume with Job Application for the post of Assistant Professor in CCS University Meerut. Invent necessary details.

Or

Write a report on the annual function of your college in 500 words.  
(10 marks)

2. Read the following passage and answer the questions that follow

No two countries can be compared with each other because of their distinct demography, culture, history, geography and also their different politics. A small country also has money to suit their needs, they can also meet their technological demand but they always have a risk due to less population which is uncertain about new changes in their lives. India can be easily compared to china as both are large in size and in their population too but there are some major differences between these two. China is working very hard to put itself in the list of developed nations with fair income for its people. China banks on development of Science, technology and trade for the upliftment of its people and its economy.

If we look at the perspective of China, it is about championing Science and technology and using them as the ladder to reach the desired destination. These both together can give a solid boost to the present and future growth of China. China has remorse for not using these two tools efficiently and wants to rectify its mistake and reap the benefits of these two crucial things. China admits that most of the inventions and innovations have not been successful because they were not very useful and efficient as per the needs of the people but if the potential of scientific innovations is utilized in a proper manner, it cannot only make life of people better and provide

enormous opportunities for the development of people, but also it can raise the living standards of people and solve many problems.

China has aimed to mark its presence in the global world. China is supposed to become a developed nation very soon. It has become the hub for pharmaceutical and electronic components already. All big tech giants have their assembly line in China. It shows the potential China has to attract foreign companies and give them a suitable and feasible environment that makes China an attractive destination for manufacturing companies.

China's attempts to make a duplicate sun speak about its progress in Science whereas China's test of hypersonic missile after revolving the earth shows its potential in technology. China has been inching upward every next day in the field of Science to take over the US as global superpower.

Q.1-You cannot compare two countries because-

Q.2-Which of these 2 pillars, China wants to grow upon?

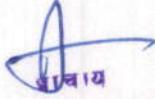

Q.3-What is the target of China for the upcoming years?

Q.4-China has become the hub for which products?

(10 marks)
